

## FPS Cassette

FPS Cassette is an external cladding system. It can be used for new construction or for renovation projects. This versatile open jointed system is based on the Rainscreen principle. It is suitable for horizontal or vertical application on low to high rise buildings, for both new and refurbishment projects. Cassettes are bent and fixed with invisible clips to an aluminium or galvanised framework, which is secured to the load bearing structure.

The FPS Cassette system offers an innovative facade solution that provides a modern and flat appearance.

### Areas of application

- Vertical walls (slope 90°) & soffits
- New construction or renovation
- Supporting structure: Concrete wall
- Brickwork
- Metal as main support
